TRF Guide for Tutors

Use when checking TRFs at the door and when pre-grading. Total 25 points.

Box	Pts	Strong answer	Think-aloud questions
Subject, Essential Question, Name, Date		The class and the standard or Essential Question from the student's Cornell notes.	Which class is this from? What is the Essential Question from your notes for this lesson?
Initial / Original Question	1	The exact question copied from the source, with the source, page, and problem number.	Where did this question come from: book, quiz, test, or notes? Can you say this question in your own words?
Key Academic Vocabulary	2	Two key words from the problem with definitions from notes or the textbook.	Which words do you need to understand to solve this? Where did you find the definition? Can you define it in your own words?
What I Know About My Question	2	Two facts or ideas the student already knows that connect to the question.	What does this remind you of? What do you already know that connects to this? Can you predict a reasonable answer?
Critical Thinking About the Initial Question	3	The student's actual work and thinking, up to the point where they get stuck. Shows what they tried.	What did your notes or textbook say about this? Can you break the question into smaller parts? Have you done a similar problem? What steps did you take? Can you work backwards?
Identify General Process and Steps	2	The steps (math/science) or process (English/history) the student followed so far.	What are the steps you know? Which step comes right before you got stuck?
Question From the Point of Confusion	2	A new, specific question about the exact step where the student is stuck, using academic vocabulary. NOT "I don't get it."	What exactly is the step you can't do? Can you use one of your vocabulary words in your question?
Resources	1	The student brought Cornell notes, textbook, worksheets, or quizzes to use.	What did you bring that can help us?
Collaborative Inquiry	2	The student asked questions of other presenters and participated in the group.	
Three-Column Notes	3	Notes on each presenter: Question | Notes | Steps or Process.	
Reflection	7	What the POC was, what they learned, when it clicked, how it connects to past learning or their world, and what was meaningful.	Look at the ! in your notes. What helped you understand? How does this connect to something you learned before?

Vague vs. strong points of confusion

I don't get number 5.	I can distribute in $3(x - 4) = 2x + 5$, but I don't understand how to get the x terms on the same side when there is an x on both sides.
I'm confused about photosynthesis.	I know photosynthesis makes glucose, but I don't understand why plants also need cellular respiration if they already make their own food.
I don't know how to write my essay.	I found two quotes for my claim, but I don't know how to explain how the quote proves the character changed.
